- Air analysis & certification
- Pipework installations & modifications
- Hygiene stainless steel pipework by coded welders
- Vacuum systems
- All makes of adsorption & refrigeration dryers repaired & serviced
- Leak surveys

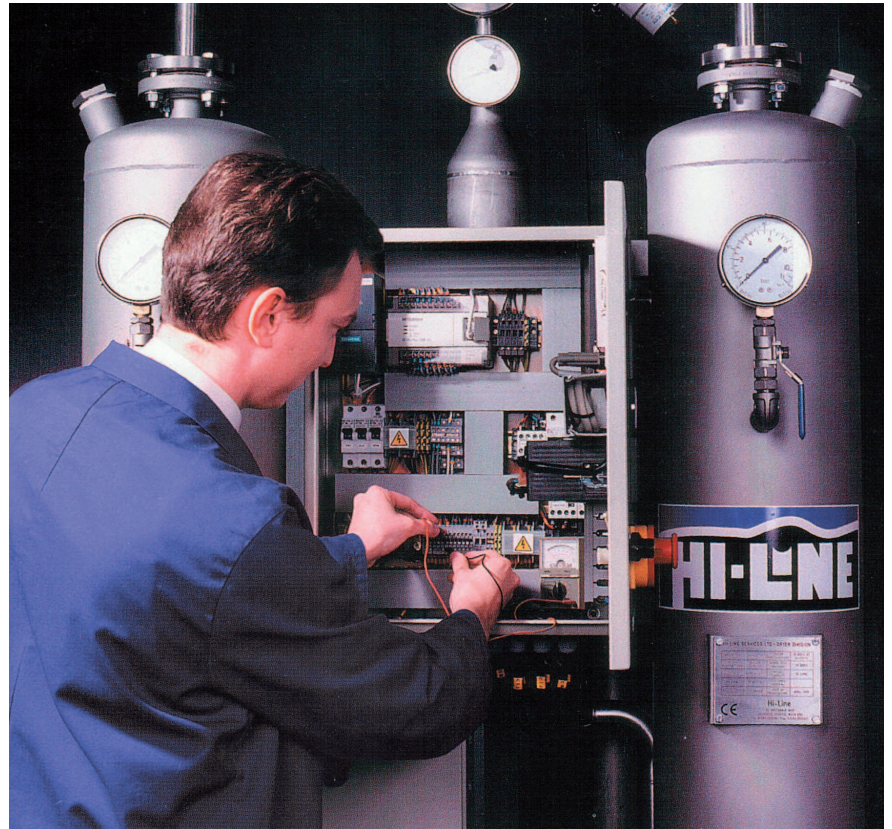

SERVICE DEPARTMENT

The Hi-line Service Department has been put together using only experienced compressed air treatment service personnel, engineers trained in all aspects of compressed air and gas generation.

Many Hi-line products are put out into the field, 'unbranded' for compressor companies and other O.E.Ms. To support these products we have an unbranded fleet of vehicles, for whenever the need arises for us to be out on behalf of a third party. (Plain overalls and customer's service report sheets on request)

All engineers are ACRIB registered, www.acrib.org.uk and every engineer is an approved "safe refrigerant handler". Hi-line are a REFCOM accredited company, www.refcom.org.uk, working in association with DEFRA and Department of Environment. This company registration scheme operates to higher standards than those stipulated in the F-Gas Regulations.

Whatever your service requirement Hi-line have discreet, well presented and qualified engineers to support their own and competitors compressed air treatment equipment.
